MANUEL TORRES SCHULTEN

Systems Engineer | Product Specialist *[Spanish, English]*

LinkedIn | GitHub | torres.schulten@gmail.com | +34 665 447 244

Professional Summary

Senior Software Engineer and Engineering Manager with 6+ years of experience building scalable, customer-focused web applications, and leading small to mid-sized engineering teams in distributed environments. Strongly hands-on, with expertise in **TypeScript, React, modern JavaScript, backend development, SQL, and AWS**, and experience performing code reviews, debugging production issues, and guiding technical decisions. Product-driven and customer-obsessed, with a focus on **shipping iteratively, improving system quality, and helping engineers grow through coaching and clear ownership**.

Professional Experience

CTO & Co-Founder

The One Percent App (Remote)

2023 – Present

Co-founded and led the technical development of a **mobile subscription-based application**, owning architecture, engineering execution, and product delivery end-to-end.

- **Designed, built, and shipped the core product**, including a mobile-first frontend and backend services supporting subscriptions and user entitlements.
- **Integrated RevenueCat** to manage in-app subscriptions, entitlements, and purchase lifecycle across platforms, ensuring reliable monetization and accurate revenue tracking.
- Defined the **technical roadmap**, balancing feature delivery, performance improvements, and technical debt reduction.
- Led and mentored a small distributed engineering team, establishing **code review standards, CI/CD workflows, and release processes**.
- Worked closely with product and design to iterate quickly on customer feedback and improve

onboarding and subscription conversion.

- Owned production reliability, debugging issues across the stack and ensuring high availability and data consistency.

Technologies: Angular, TypeScript, Capacitor, NestJS, RevenueCat, AWS, CI/CD, SQL

Senior Full-Stack Engineer

ViewMind Inc. (Remote)

2021 – 2025

Led the design and development of multiple **customer-facing web applications** used in production by medical and research teams.

- **Led technical execution** of three complex web products, collaborating cross-functionally with product managers, designers, and researchers.
- Provided **technical leadership and mentorship** to engineers, performing code reviews, architectural guidance, and hands-on debugging.
- Designed and optimized a **research-grade data platform**, ensuring data quality, performance, and long-term scalability.
- Balanced **feature delivery with system improvements**, improving performance and maintainability through modular architecture and lazy loading.
- Built and maintained **cloud-based deployment workflows** using AWS (Lambda, S3), improving operational reliability.
- Worked in **iterative Agile cycles**, ensuring consistent delivery of value and high-quality software.

Technologies: React, TypeScript, SQL, MongoDB, Python, AWS

Full-Stack Developer

Glotools (Remote)

2020 – 2021

Worked on customer-facing SaaS products in a fully remote environment.

- Built and maintained **scalable web applications** using React, SQL, and Ruby on Rails.
- Implemented **CI/CD pipelines** with GitHub Actions, reducing deployment time by 30% and improving release reliability.
- Collaborated closely with product and engineering peers to debug production issues and ship features iteratively.

- Improved application performance through asset optimization and lazy loading strategies.

Technologies: React, Ruby on Rails, SQL, GitHub Actions

Software Engineer

Buenos Aires Province Government

2021

Contributed to internal systems with high reliability and security requirements.

- Developed and maintained internal tools adhering to strict government security and compliance standards.
- Participated in **code reviews and quality assurance processes**, helping ensure system stability and correctness.

Key Projects

CryptoVoice

Real-time analytics platform for detecting undervalued crypto assets.

- Designed and built interactive dashboards for complex data visualization.
- Worked with large-scale data pipelines and predictive analytics.

Technologies: React, Python, Spark, MongoDB

SnowMatch

Platform for managing ski lessons, scheduling, and payments.

- Led frontend architecture and UX improvements, increasing user retention by 20%.
- Worked closely with stakeholders to align product features with user needs.

Technologies: React, AWS, Docker, SQL, Jenkins

Education

Master's Degree in Big Data Management and Analysis

Universitat Politècnica de Catalunya (UPC), Barcelona, Spain

Systems Engineer

National Technological University (UTN), Argentina

Technical Skills

Frontend Technologies:

- ReactJS, Angular, Redux, TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS/LESS, Capacitor

Backend and Databases:

- Ruby on Rails, Java, Python, MongoDB, SQL, NestJS

Cloud and Tools:

- AWS (S3, Lambda, EC2), Docker, GitHub Actions, Jenkins

Other:

- Accessibility (WCAG standards), Performance Optimization, Agile Methodologies
